Autumn Issue

1997 to 2007

The year 1997 was the birth year of a new encapsulation sheeting system now known world wide as EnviroWrap™

On this tenth anniversary of the product launch the EnviroWrap team in conjunction with its exclusive long term extrusion partners, the RKW Group, EnviroWrap Limited has launched it's new AFR range of products.

The team of EnviroWrap & RKW continually seek to enhance the quality and performance of its products year on year. Since January 2007 extensive field trials have been carried out in Belgium, Holland and the UK, involving over 25,000 m2 of encapsulation. These trials were carried out on live projects using EnviroWrap Limited skilled Encapsulation Operatives. All field trial results were analysed and evaluated in detail culminating in the first 70 ton of the production being extruded in week 32 of this year.

Why Seek Continuous Development ?

EnviroWrap™ Sheeting is unique and exclusive to EnviroWrap Limited, the formula (s) are protected by IPR agreements and are often imitated by others but never matched. Because EnviroWrap Limited hold the design formulas and exclusive manufacturing processes, it enables EnviroWrap Limited to dictate the products development and it is this continued development that makes EnviroWrap™ Sheeting both exclusive and superior to any other like product in the market place.

What Is AFR Technical Sheeting ?

EnviroWrap™ new AFR Sheeting incorporates the latest Fire Retardant Technologies, this new Advanced Fire Resistant (AFR) Sheeting gives the following enhanced characteristics:

- EnviroWrap™ AFR Sheeting will not burn.
- Envirowrap™ AFR Sheeting has improved weldability and strength.
- EnviroWrap™ AFR Sheeting has improved heat retraction performance.
- EnviroWrap™ AFR Sheeting has improved elongational characteristics.
- EnviroWrap™ AFR is the only Heat Retractable Sheeting that has 3 monthly Third Party Audits and Production Batch Sampling thus ensuring high quality, guaranteed consistency and total product confidence.
